

Fetch Front-End Internship Take-Home Exercise

For this exercise, please use [Dog API](#) to build an application where users can view an image gallery of their favorite dog breeds.

- Users should be able to select one or more dog breeds.
- Selecting a breed should display images of that breed in the gallery.

While those are the only basic requirements, we encourage you to build out extra features that you think would be helpful—or just interesting to implement—to set your exercise apart.

Additional Requirements

- Your source code should be in a hosted git repo (e.g. GitHub, GitLab, etc.)
- You should include any necessary documentation to run your site locally

How to submit

Please provide a link to your public code repository via Greenhouse.

How will this exercise be evaluated?

An engineer will review the code you submit. You will be evaluated based on:

- Code quality
- Use of best practices
- Fulfillment of requirements
- User experience

Can I provide a private repository?

If at all possible, we prefer a public repository because we do not know which engineer will be evaluating your submission. If you are still uncomfortable providing a public repository, you can work with your recruiter to provide access to the reviewing engineer.

How long do I have to complete the exercise?

There is no time limit for the exercise. Out of respect for your time, we designed this exercise with the intent that it should take you a few hours. However, you may take as much time as you need to complete the work.

For any further questions or clarifications, please reach out to your recruiter.
